

What's New in Survey 4?

The Big Picture

- Incorporate Web 2.0 technologies in an enterprise management platform
- Associate applications with parent packages
- Provide visibility into SaaS usage
- One stop shopping for license entitlements
- Associate license keys with purchased applications
- Office migration and plug-in management is now simplified
- Application and hardware usage reporting is available in a variety of reports with different views and levels of detail

Web 2.0 User Interface

The newly designed Survey 4 user interface has been completely re-written with Web 2.0 technology. Enhanced and interactive UI chart widgets, customizable export features, report search and improved end-user experience are all part of Survey 4 created with Web 2.0 users in mind.

Package Application Discovery

Survey 4 introduces the ability to intelligently associate an application with its parent package on a machine level basis. Survey now provides unprecedented clarity on application deployment and usage.

Questions answered by this feature:

- I know my end-user community is using Microsoft Word, but what package does Microsoft Word belong to?
- Are all of the Microsoft software packages fully deployed?
- Is there an opportunity to downgrade or consider a web-based version of a software package?

Web Application Discovery

Survey 4 provides a dynamic Web Application Discovery, allowing complete visibility into SaaS applications from VDI/Application migration projects to rationalizing how intranet/extranet sites are being used. Weighted hit counts and discrete machine reporting on a per domain basis provide rich business intelligence on how and which web applications are being consumed.

Questions answered by this feature:

- Which web applications are important to my organization?
- Which websites should I be tracking usage on?
- Am I utilizing my SaaS applications efficiently?
- Who is accessing administration websites within the organization?

License Entitlement Linking and Web Application Association

With Survey 4, License Management has been augmented with the ability to link entitlement documents from a website, file server or even an FTP site. In addition, Survey license manager now allows the tracking of web applications making web application subscription licensing tracking a breeze. These License Manager enhancements further round out Survey's license management technology and provides a "one stop shop" for all of software licensing needs.

License Key Analysis

While Survey 3.9.1 can discover license keys from many products, Survey 4 can now intelligently link discovered and manually entered license keys with actual purchased applications. It is now possible for a self audit to automatically include a check on individual license key over-provisioning.

Office Plug-in Discovery

Do you know how many Office plug-ins are deployed in your environment? Survey 4 will generate a report to clarify which plug-ins have been installed in association with which application and whether they are currently in use.

Actionable Intelligence Reports

Survey 4 ships with over 20 new out-of-the box reports which focus on solving contemporary business challenges with actionable intelligence reporting. Each new report has been carefully designed, vetted and validated against real world use case scenarios from migration planning, VDI/App-V migration initiatives, to downsizing and rationalizing software licenses and hardware assets. Actionable Intelligence Reports enable users to build dynamic reports that map to their business needs.

Improved Report Scheduler

Waiting for large reports to execute is a thing of the past. Schedule all of your critical reports within seconds and analyze the results when you are ready.

About Scalable

Since 1999, over 10,000 organizations worldwide have used Scalable solutions to manage and control expense across their IT estates, reporting a substantial return on investment (ROI) and a reduction in the total cost of ownership (TCO). Our solutions help IT professionals manage the entire life cycle of IT assets, from the moment they enter the organization until they are retired in a cost-effective manner. By focusing on the exact IT asset needs of an organization, we can ensure capital is optimally deployed, profitability is improved and productivity greatly enhanced.
